

Title: Senior Database Engineer

Job Description

This individual is the hands-on principal designer and developer (i.e. coder and not DBA) of the Database subsystem of the Mimosa NearPoint product.

Required Experience

- 10+ years developing C++ and/or C# database-driven applications, preferably for SQL Server, with low-latency accesses and dense data hosting requirements.
- Strong background in designing and developing enterprise class applications with focus on database performance, scalability and high availability.
- Experience implementing clustering and replication are also a must.

Required Skills

- C++, C# and SQL Server stored procedures, .NET, COM/ADO, XML-based data import/export, and excellent database schema design.
- Strong problem solving, high creativity, and the ability to discuss advanced technical concepts at an abstract technical level.
- Experience with database performance analysis and tuning (database physical tuning, logical table/index tuning, query tuning and optimization of application code for high throughput and high capacity databases).
- Implementation of search and mining applications on semi-structured data using advanced semantic indexing techniques, OLAP and natural language processing techniques, is a plus.

About Mimosa Systems, Inc.

Mimosa Systems, Inc. delivers next-generation information management solutions for information immediacy, discovery, and continuity. Mimosa™ NearPoint™ for Microsoft® Exchange Server is the industry's most comprehensive information management software solution for Microsoft Exchange, unifying email archiving, recovery, and storage management.
