

FINAL RELEASE

Instant InfoSystems Partners with Mimosa Systems to Meet the Growing Demand for Next-Generation Enterprise Email Archiving Solutions

Los Angeles, CA and Santa Clara, CA – December 9, 2008 – Instant InfoSystems (IIS), a leading provider of Enterprise Message Management solutions, including email archiving and enterprise fax management, and Mimosa Systems, a leader in Live Content Archiving solutions, today announced a strategic partnership that allows Instant InfoSystems to resell, implement, and support Mimosa's NearPoint™ next-generation email archiving solution.

"As a leading provider of email archiving solutions, we believe it is our job to understand our customers' requirements, priorities, and environments, and recommend the solution that best fits those needs," stated David Klein, CEO of Instant InfoSystems. "We selected the Mimosa product after an in-depth technical evaluation which identified numerous functional and architectural benefits within the NearPoint product. We are proud to be offering the Mimosa NearPoint product to our customers who demand a superior and unified solution for content archiving, eDiscovery, and regulatory compliance."

Mimosa NearPoint addresses enterprise requirements for content archiving, business continuity, and storage optimization in a unified solution. The NearPoint product utilizes a grid architecture which allows servers and storage to be added or removed as needed to meet changing requirements. NearPoint provides superior functionality in key areas such as immediate mailbox and message recovery, disaster recovery, and instant message and file archiving, in a highly scalable solution.

Unlike other email archiving products, NearPoint captures email data from production servers using transaction log shipping with no impact on the Exchange Server. It maintains an up-to-date copy of all Exchange data, preserving the rich context of all users' mailboxes and public folders, without relying on journaling or MAPI. This architecture offers a major advantage for eDiscovery and Exchange recovery.

"We are thrilled to have Instant InfoSystems as a partner of Mimosa," stated Christophe Culine, Senior Vice President of Worldwide Sales for Mimosa. "As a leading solution provider in the rapidly growing email archiving market, Instant InfoSystems brings a significant depth of experience and understanding to our customers—extending the sales reach, marketing knowledge, and technical expertise of Mimosa products to customers across the country."

With email recognized as a business record, managing all email information throughout its lifecycle is becoming a global requirement. "The need for eDiscovery, regulatory compliance and storage management is constantly driving businesses across the United States and abroad to implement email

archiving solutions,” said David Klein, CEO of Instant InfoSystems. “We are committed to assisting customers to implement solutions which best meet their requirements. We look forward to working closely with Mimosa to deliver the most comprehensive content archiving solution to meet their requirements today and in the future.”

Instant InfoSystems recently announced the release of version 2.0 of the IIS Email Archiving Scorecard early next year. The IIS Email Archiving Scorecard is an in-depth technical evaluation of leading email archiving products designed to help enterprises identify the solution that best meets their specific requirements. IIS has been selected to speak on the topic, “Email Archiving Scorecard: An In-Depth Technical Evaluation of How Leading Solutions Stack-up” at the upcoming AIIM International Conference and Expo in Philadelphia in March 2009.

IIS also provides email archiving solutions from Symantec, H&S and ZL Technologies. IIS solutions are complemented by professional services and technical support.
